- Corrosion resistant**
- UV resistant**
- Cost effective**
- Reinforces steel**
- Long lasting**
- Simple application**

*FibaRoll protecting corroded risers*

**Rehabilitate Risers and Extend Asset Life**

## Using FibaRoll reinforces and prevents corrosion in one application

# FIBAROLL

Risers on Offshore platforms are particularly difficult to protect against corrosion. FibaRoll is easily applied and offers long term corrosion protection and reinforcement in this vital area.

FibaRoll provides excellent corrosion protection and with high tensile strength rehabilitates the steel.

FibaRoll has been practically tested in high temperatures, 100% humidity and salt water on platforms in SE Asia without damage.
